**TANK FILLING SYSTEM &
FUEL OIL OFFLOADING**

INTRODUCTION

The ALBANY OFFLOAD Pump Assembly is a factory packaged system for transfer of fuel oil from gravity trucks to storage tanks and control of filling operations to prevent overfill and allow for full draining of the truck delivery hose. The ALBANY OFFLOAD provides a ready means of ground level connection of the full hose, and captures spills that may occur at the fill point during filling operations. The ALBANY OFFLOAD includes a high capacity fuel transfer pump and UL/ULC Listed pump controls.
